

Leading sustainability solutions provider Cenviro embarks on digital transformation by moving to the cloud with SAP Suite on HANA with IS-U Waste Management

Kuala Lumpur, Malaysia, 20 March 2017 – Cenviro, the leader in integrated environmental solutions, today announced that it will be deploying multiple SAP solutions including SAP Suite on HANA with IS-U Waste Management as part of the organisation’s digital transformation. The deployment will leverage on the services of Deloitte Consulting SEA with iTelligence Outsourcing MSC as hosting partner.

Cenviro, a wholly-owned subsidiary of Khazanah Nasional Berhad, is a leader in the Malaysian green solutions revolution, providing innovative environmental solutions through a cradle-to-cradle philosophy. The company leads in all areas of waste management, from treatment to recycling, recovery and final disposal. Cenviro also owns and operates Malaysia’s first integrated waste management centre in Negeri Sembilan, a state-of-the-art facility which meets stringent international and local standards.

“With 20 non-integrated and distributed systems operating across multiple industries, and with such a broad scale of responsibilities, we saw the importance of moving away from fragmented processes to automating and consolidation our systems to support operations across the organisation. The management saw that it was imperative to resolve this challenge by integrating and centralising our systems before we embark on further and planned expansion in our business and facilities,” said Cenviro Managing Director Khalid Bahsoon.

One of the pressing requirements that Cenviro needed to address, as its business grows, is reconciling financial data from different sources. The management was also aware of the need to improve operational performance monitoring throughout the group of companies. Upon evaluating several options, Cenviro decided to work with SAP and its partners, Deloitte Consulting and iTelligence Outsourcing MSC, to deploy a fully-integrated ERP (enterprise resource planning) system. In the process of evaluation, Cenviro’s management recognised that SAP had the ideal, proven solution to address these issues, and the possibility of customising unique modules tailoring to Cenviro’s requirements.

At the initial phase of its implementation, Cenviro will look towards the SAP Suite on HANA with IS-U for Waste Management. IS-U is SAP's industry specific solution for the utilities vertical which includes best practices for waste management within an integrated system. The platform is designed to facilitate business process simplification and improve decision making and to pave the way for future innovations. It includes capabilities to optimize activities for performance management, sales, finance, operations and human resources. With this, Cenviro sets its sights on becoming more efficient as it consolidates its processes by leveraging business intelligence solutions.

Ultimately, SAP waste and environmental services solution is intended to streamline and optimize commerce, service, logistics, billing, and customer engagement activities. The software will enable Cenviro to meet critical business, technical, and personnel-related requirements cost-effectively to help it offer better and more efficient waste disposal services.

“SAP has long been a forerunner in helping companies simplify their operations and our mission is to lead the global transformation in the new digital economy, empowering companies to reimagine their business using the SAP digital business framework. We're excited to be working with Cenviro on a project of this scale and look forward to working hand-in-hand with the company as it embarks on further expansion,” said Terrence Yong, Managing Director, SAP Malaysia.

“SAP S/4HANA is the digital core that paves the way for latest technologies such as the Internet of Things (IoT), Big Data, real-time analytics, mobile, business networks, third-party systems, and more. With SAP solutions, Cenviro can now run its business more efficiently and in 'real time',” added Yong.

“We are keen on seeing the results once the solution has been deployed and run for a period of time. With this deployment, we expect to move our operations on to a whole new level by using simple tools to perform complex processes,” said Bahsoon.
